

CSC309 A4 Project

Open MongoDB database:

Open console, enter directory where MongoDB is stored.

```
CD /MongoDB/Server/3.2/bin
```

```
mongod.exe
```

Open new console, enter directory where MongoDB is stored.

```
CD /MongoDB/Server/3.2/bin
```

```
mongo.exe
```

Open new console, enter directory where application is stored

Run application

```
node server.js
```

Console will print "connection successful" when application is connected to server

Open browser, go to localhost:3000

Page will redirect to main page

When not logged in, there is only access to search for food, and register and login pages to setup user.

To setup a user, first go to register page to setup user account for the website, or go to the login page and login through google account.

After successful registration (usernames must be unique), page will redirect to login page, where user can login to their account.

After successful login, page will redirect to Profile page, where user account information can be further specified.

New host page allows user to set themselves as a host in our website, allowing them to become a new merchant, after successful setup, will redirect to their own host page.

Search page allows users to search for the hosts that they are interested in, and will display list of hosts that satisfy their search criteria.

/user/show will show users currently setup in the database

/host/show will show hosts currently setup in the database
